Mobile App Developer | MVP Specialist

Solution-oriented Mobile App Developer and Software Engineering student with a focus on transforming startup concepts into high-impact MVPs. Specialized in building scalable cross-platform applications for e-commerce and utility sectors using Flutter and React Native. Proven ability to bridge the gap between complex business requirements and user-centric technical solutions.

WORK EXPERIENCE

Freelance & Academic Projects
01/2024 - Present

Mobile App Developer

- Inventory Management System: Engineered a comprehensive sales application for local clients featuring QR-code-based transactions and item management.
- Cross-Platform Architecture: Designed and deployed mobile applications using Flutter, ensuring consistent performance across Android and iOS.
- Backend Integration: Implemented secure authentication and cloud databases to handle dynamic data and user-specific content.
- Collaboration: Utilized Git and GitHub for version control and iterative project development.

EDUCATION

BSc in Software Engineering
Haramaya University 01/2022 - Present

PROJECTS

Smart Reminder App (Realminder)

- Developed a high-priority reminder system using alarm-based alerts to replace easily ignored silent notifications.
- Built a comprehensive user dashboard featuring daily and weekly appointment reports and status tracking.

Movies Discovery App (Entertainment)

- Integrated the TMDB API to deliver real-time movie data, including trailers, categories, and detailed descriptions.
- Utilized Firebase for secure user login and persistent watch-list management.

Telebirr Clone (Fintech Prototype)

- Created a high-fidelity prototype focused on complex mobile payment flows and secure user navigation.
- Applied advanced UI/UX principles to replicate high-traffic financial app environments.

VOLUNTEERING & LEADERSHIP

Haramaya University
Co-founder, HUCISA

Active leader within the Haramaya University Computing and Informatics Students Association.

Haramaya University
Tech Workshop Lead

Organized student coding sessions and collaborative learning activities to bridge technical skill gaps.

SKILLS

Mobile Development: Flutter & Dart, React Native

Backend & Services: CRUD & Data Modeling, Firebase & Appwrite, RESTful API Design, Supabase

Tools & Architecture: Git & GitHub, TypeScript, UI/UX (Photoshop)
